

Instructions For Sensitive Crop Locator Website

The Sensitive Crop Locator website will integrate information from the application that will include, but is not limited to: the name and address of grower; type of crop/commodity produced; acres of crop produced; and the specific location where each crop is grown. This information is then placed into a geographical information system that will provide geo-coding for each location where specialty crops are grown. This database is not intended for the use by homeowners to list their property when growing fruit, vegetables or other sensitive/specialty crops for their own use. It is for those individuals who are growing sensitive/specialty crops for commercial production.

In order to have your crop/commodity listed you must complete the attached application for each field that you want to have listed on the website. If you have multiple locations to be listed please make as many copies of the form as necessary. The following information needs to be provided:

General information – List your name address and contact information.

Specific Crop Information – List your name, approximate acres of the field, complete address of the field, type of crop and latitude and longitude, if available in the following format – Latitude 39.121560 N Longitude 77.121560 W. This information must be provided for each field you wanted listed on the locator.

Note: If the latitude and longitude for the field is not available the complete address, including zip code, of the field must be provided in order for the information to be plotted on the maps.

Sign and date the application – the application must be signed and dated in order to enter the information into system.

Please return the application(s) to the Maryland Department of Agriculture, Pesticide Regulation Section, by either FAX to (410)841-2765 or by mail to the Maryland Department of Agriculture, Pesticide Regulation Section, 50 Harry S Truman Parkway, Annapolis, MD 21401. Should you have any further questions concerning the Pesticide Sensitive Crop Locator please contact this office at (410)841-5710.
